Delegates from academia, government laboratories and industry are invited to attend the 2020 conference on ‘Transition to Low Carbon Mobility’ hosted and organized by the Clean Combustion Research Center (CCRC) at KAUST.

Topics:
1. Low Carbon Fuels and Engines: This topic encompasses talks and discussions on biofuels, hydrogen carriers, and other non-traditional fuels and the engine technologies that can use them. Speakers will discuss the major challenges limiting adoption and deployment of these new fuel/engine systems and the research opportunities.
2. Impact of Low Carbon Mobility: This topic will feature talks and discussions from thought leaders on the impact of these various fuel/engine systems on reducing the sector’s carbon footprint, including life cycle analyses of these systems.
3. Moving up the TRL scale: This topic will focus on the particular challenges and opportunities associated with moving technologies out of the TRL 1-3 levels and through the valley of death to demonstration scale and beyond.

Travel fellowships for students and postdoctoral researchers will be awarded on the basis of merit. Fellowships cover all costs associated with attending the workshop including airfares and accommodation.

Important Dates
- Registration Open: 1, September 2019
- Registration Closes: 30, September 2019
- Notification send to selected travel fellowship awardees: 24, September 2019
